

Take Test: Test 1 (2018-19)

Test Information

Description

Instructions

Timed Test This test has a time limit of 1 hour. This test will save and be submitted automatically when the time expires.
Warnings appear when **half the time, 5 minutes, 1 minute, and 30 seconds** remain.

Multiple Attempts This Test allows 3 attempts. This is attempt number 1.

Force Completion This Test can be saved and resumed at any point until time has expired. The timer will continue to run if you leave the test.

This test does not allow backtracking. Changes to the answer after submission are prohibited.

Question 1 of 10 >

Question 1

10 points

Save Answer

Consider a binary communication system which uses the following two equiprobable signals $s_0(t)$ and $s_1(t)$ of equal energy E . The signals are transmitted over a communication channel which adds white Gaussian noise having a double-sided power spectral density of 10^{-6} W/Hz. The constellation diagram is given below, where the decision regions are also shown.

If the forward transition matrix \mathbb{F} of the equivalent discrete channel is

$$\mathbb{F} = \begin{bmatrix} 0.994 & 0.006 \\ 0.006 & 0.994 \end{bmatrix}$$

then

- (a) $d = 12.5 \times 10^{-3}$;
- (b) $d = 6.25 \times 10^{-3}$;
- (c) $d = 2.5 \times 10^{-3}$;
- (d) $d = 5 \times 10^{-3}$;

(e) none of the above.

- ☐ a
- ☐ b
- ☐ c
- ☐ d
- ☐ e
